

KEEPING YOUR CHILD SAFE ON EVERY TRIP

To help you make sure your child car restraint or booster seat is still installed and being used correctly, we've put together a list of daily and monthly checks you can do at home.

DAILY CHECKS

- Is the top tether strap attached to the correct child car restraint anchorage point in your vehicle?

- Is the top tether strap firm (not overtight) with no twists?

- Is the harness adjusted to fit your child correctly with no twists?

- Is the seatbelt threaded through the correct path and buckled in?

- If you are using ISOFIX, are the ISOFIX attachments connected to the correct anchor points and have they been adjusted correctly (so that the indicator is green)?

MONTHLY CHECKS

- Are the harness straps adjusted to the correct height for your child?

- Is the headrest at the correct height (just above your child's shoulders, but not touching them).

- Is the child car restraint still suitable for your child's size? The height markers on your child car restraint will show you when your child has reached the maximum size limit.

- Is your child car restraint in good condition, with no cracks, frayed/damaged straps, or missing parts?
